DETAILED ACTION

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

1. Claims 1-18 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Specifically, the claiming of structures being in contact with or implanted within the body amounts to an inferential recitation of the body, which renders these claims non-statutory. The examiner recommends changing "in contact" to --adapted to be in contact with--.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

- 1. Claims 1-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 1 describes pants that can be "in direct contact with a human chest". It is unclear how pants can be in contact with the chest.
- 2. Claims 1-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The term "effect of medium and low frequency" in claim 1 is a relative term which renders the claim indefinite. The term "medium and low frequency" is not defined by the claim, the specification does not provide a standard for

Application/Control Number: 10/658,256 Page 3

Art Unit: 3762

ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

3. Claims 3 and 9 recites the limitation "an elastic waistband" in the third and fifth line of the respective claims. There is insufficient antecedent basis for this limitation in the claim. It is unclear whether the applicant intends to claim the waistband. It is suggested to first positively recite the waistband before it is used.

- 4. Claim 6 recites the limitation "said pulsed high voltage generated" in the second line of claim 6. There is insufficient antecedent basis for this limitation in the claim.
- 5. Claim 7 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The term in claim 7, "is installed" is vague and sounds more like a method step rather than a structural limitation.
- 6. Claims 10 and 11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Both claims 10 and 11 are vague and sounds more like a method step rather than a structural limitation.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 3762

1. Claims 1-3 and 7-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Maida (US 6,151,528) in view of Wyss et al. (US 4,148,321) and Post et al. (US 6,210,771). Maida discloses the claimed invention and using low and medium frequencies.

In the alternative, Maida does not disclose the low and medium frequencies, conductive buttons and overlapping conductive strips. Wyss et al. teaches that it is known to use low and medium frequency during muscle massage, as set forth at column 2, lines 7-19. Post et al. teaches that it is known to substitute fasteners of known functional equivalents as set forth at column 2, lines 42-46 and to overlap the conductive strips in at column 2, line 54. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the pulse-current generator and the clips as taught by Maida with the low and medium frequency generator, conductive buttons and the overlapping conductive strips, respectively, as taught by Wyss et al. and Post et al., in order to reduce pain during the massaging of muscles, make the generator removable in order to wash the garment and to conserve space while stimulating different areas of the body.

As to claim 3, Maida discloses, "in figs. 1 to 3 of the drawings, electrically conductive portions of the fabric layer are denoted by 13, 14 and 15 and are disposed at the patient's waist (sheath belt) and thighs (sheath leggings) respectively"(col. 3, lines 12-15). The elastic fabric of the insulating coating layer 23, thus creates and eclectically conductive portion at the waist that is elastic.

Application/Control Number: 10/658,256

Art Unit: 3762

As to claim 7, Maida discloses a "generator 12 comprises a device 24 (e.g. a switch) for selection of the connections of the generator outputs to the three electrically conductive poles 13, 14, 15"(col.4, lines 46-48).

Page 5

As to claims 11-12 and 18, Maida discloses in col. 3, lines 25-28 "at the conductive portions 13, 14, 15 there are electrical contact means or strips 17, 18, 19 respectively each provided with a sticky surface for steady application or sewn".

As to claims 13-14 and 16-17, Maida discloses in col. 3 and 4, lines 65-67 and 1-9, the use of an insulating coating layer 23 on toreador shaped pants as seen in figure 1. The elastic fabric of the insulating coating layer 23, obviously functions similarly to the toreador pants with elastic in the lateral sides because both provide a means for stretching in order to fit individual users.

2. Claims 4-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over the modified Maida as applied to claims 1-3 and 7-18 above. The modified Maida discloses the claimed invention with the hertz range in col. 4, lines 30-38 but fails to teach the I/C circuit. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the generator as taught by Maida with an I/C circuit since it was known in the art that therapy systems use I/C circuits to provide a smaller inexpensive circuit with reduced capacitance.

Application/Control Number: 10/658,256 Page 6

Art Unit: 3762

Specification

1. The disclosure is objected to because of the following informalities: page 5, line 15 references the internal circuit "in Figures 5 and 6". In actuality it is in figures 6 and 7. Appropriate correction is required.

The disclosure is objected to because of the following informalities: page 6, line
 references "Fig. 14" when it describes figure 11. Appropriate correction is required.

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "contact with a human chest" in claim 1 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of

Application/Control Number: 10/658,256

Art Unit: 3762

the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Page 7

2. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference character(s) not mentioned in the description: 22 in Figures 2 and 3. In addition, 18 in Figures 5, 8-11 and 14-15 was also omitted form the specification. Only 18 in figure 21 was described. Corrected drawing sheets in compliance with 37 CFR 1.121(d), or amendment to the specification to add the reference character(s) in the description in compliance with 37 CFR 1.121(b) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alyssa M Alter whose telephone number is (571) 272-4939. The examiner can normally be reached on M-F 9am to 4pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Angela Sykes can be reached on (571) 272-4955. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
